

Acknowledgments

This research was carried out at Electrotechnical Laboratory in collaboration with Physikalisch-Technische Bundesanstalt of Germany (PTB), National Measurement Laboratory of Australia (CSIRO/NML), and Japan Electric Meters Inspection Corporation (JEMIC). The authors would like to express their gratitude to the co-researchers, Manfred Klonz of PTB and Barry D. Inglis of CSIRO/NML, for their indispensable contribution to this work.

The authors would like to thank members of the Metrology Fundamentals Division of ETL; J. Kinoshita, M. Nakanishi, H. Nishinaka, Y. Sakamoto, T. Sakuraba for their stimulating discussion and support for the experiments. The authors also would like to thank R. Yasuda of JEMIC for his valuable help in the calibration.

S. Honda and N. Hayashi of Yatoro Electronics Co. are gratefully acknowledged for their valuable contribution in the development of the KST003 FRDC source. The authors are grateful to the valuable comments and feedback on the KST003 FRDC source from; T. Spiegel of PTB, I. Budowsky of CSIRO/NML, S.W. Kwon of Korea Research Institute of Standards and Science, H. Levinson of Best Technology Co., and M. Flueli and P. Weibel of Swiss Federal Office of Metrology. The author would like to express their gratitude to J.

R. Kinard, T. E. Lipe, N. M. Oldham, C. A. Hamilton, S. P. Benz and C. J. Burroughs of NIST, G. Small and J. Fiander of CSIRO/NML for the stimulating discussions on the FRDC method.

The authors wishes to express their gratitude to T. Sakamoto, chief, Electronic Devices Division of ETL, T. Endo, chief, Metrology Fundamentals Division of ETL, H. Bachmire, head, Electricity Division of PTB, S. Hashimoto, ex-director, Measuring Standards Division of JEMIC, for their administrative support on this collaborative research.

The authors would like to express special appreciation to A. Shoji and M. Koyanagi of ETL for their continuous support and encouragement to publish this report on the ac-dc transfer standard at ETL. The authors are indebted to V. Bubanja of Measurement Standards Laboratory of New Zealand for the careful proofreading and valuable comments on this report.

This work is based on the results of continued researches on the ac-dc standard at ETL. Former researchers, G. Yonezaki of ETL, Prof. T. Yamazaki of Chiba Institute of Technology, and Prof. K. Shida of Saga University are gratefully acknowledged for their valuable efforts to improve the ac-dc standard at ETL.
